Increase Your Monthly Service Revenue With MobileRMM™

You probably haven't heard of Notify Technology, but we have heard of you. We are reaching out to MSPs and IT Service Providers to suggest a way for you to increase your monthly revenue per customer and potentially give you an additional service offering for new customer acquisition. Your current RMM platform provides managed IT services to your customers by managing their desktop, laptops, servers, networking, and possibly other types of hardware and software. Notify can introduce you to a potentially new revenue opportunity that lies within your installed base of customers as well as new customer acquisition.

Mobile device usage has increased in the SMB market to the point that each one of your customers likely has as many smartphones and tablets as they do desktop and laptop PC's. **Have you considered enhancing your managed services offering to include your customers smartphones and tablets?**

Notify thinks it knows why you haven't. To start with your current RMM solution doesn't provide any RMM for smart phones and tablets, so you had to look elsewhere. You researched and possibly even evaluated one or more mobile device management (MDM/EMM/UEM) solutions. Unfortunately, you were discouraged as you discovered they were costly, overly complicated, not flexible on licensing or billing just for starters. And of course, none of them integrated into your PSA or RMM. Yes, we hear these same issues from dozens of MSPs we talked to.

Good news – Notify has been providing managed mobility solutions for over 10 years and has developed Mobile RMM specifically designed for MSPs who want to enhance their managed services to include smart phones and tablets.
